JOKER

A digital asset created to create creativity

1. Introduction

If joker is like **http** *then Joker Joker is* **https** *— a secure transport layer*

JOKER *addresses a major weakness in Joker: the lack of privacy.*

This token enables smart contracts where no friend, family, nor foe can see what you bought or for how much.

3. Economic model : JOKER Foundation

Our goal

- The goal is to turn joker into a token for one's daily payments in the Anonymous Market Place.

- One of the main goals is therefore to develop a wallet that is accessible by Tor browser and will be used in Anonymous EMarket Place.

The Road Ahead

Current funding

Our plans for the next few years include:

- Add joker to more Exchanges
- Expand our Community
- Web Tor Wallet
- Implementation of Zero-Knowledge Snarks
- Development of Anonymous E-Market Place

Its purpose

The foundation will function as an umbrella under which all expenses and funding for the development of joker will be managed and be accounted for. This means full transparency towards the community on

the costs and funding of the project, but also the community's participation on how we want and/or can fund future development.

The funding of the development occurs currently in three ways:

- Funding by admins (out of their own pocket)
- Free offers
- Donations

Where / What

The Joker Joker Foundation can be found on the official website and will offer updates and information on:

- The current balance of the development fund in Joker & BTC
- Incoming donations
- Cost of current and past projects
- Information on how to donate

4. How it works

- With the new **Joker Joker's Smart Contracts**, this token allows direct anonymous payments between parties.

- Joker Joker transactions exist alongside normal (nonanonymous) transactions. Each user can convert nonanonymous coins (Ethers) into anonymous coins, which we call Joker Joker.

- Users can then send Joker Joker to other users, and split or merge Joker Joker they own in any way that preserves the total value. Users can also convert Joker Joker back into normal Ether, obfuscating any possible traceability.

- Joker Joker mixes transaction tokens by using other wallets controlled by Smart Contracts, hence all the operations in Smart Contract are transparent and reinforce consensus of the Network.

5. Specifications

- Contract address: **0x207579a859CeEcB26ddF20fC7B2EeF4867056718**

- Total Coins: **1,000,000,000,000**

- Symbol: **jok**

- Decimals: **18**

7. Anonymous Emarket-Place

We are working on Smart Contract Mixer. After Joker platform implements Zero-Knowledge Snarks, we will add this feature to our system (2022 Q2)

We will change our smart contract in order to follow new technology instead of just obfuscating (mixing tokens) transactions.

Joker Joker token is a foundation of the Anonymous EMarket Place that we are building to be also accessible by Tor Browser.

Joker Joker will also facilitate fully-anonymous, untraceable transactions which will be very demanding in upcoming 2022 year to store the value of the assets.

JOKER
